Components map: one call, ring to handoff

Rows are the actors, columns are the stages. Follow the numbers. Step 2a/4a/5a is a phone call through Vaani; 2b/4b/5b is the same conversation on the website. Both paths meet at step 6 and run identical rules from there.

Trigger · Input · Context · Processing (code) · AI · Output · Human

Actor	Trigger what starts it	Input what comes in	Context what it knows	Processing rules in code	AI where a model works	Output what leaves
Caller prospect, any hour	1 **Calls Aangan**, day or night: rings the Vaani line, or taps **Call** on the website.					
Vaani phone voice agent		2a Picks up in seconds; **speech-to-text** on the caller's voice. Vaani agent "Aangan Studio - Meher"			4a **Meher talks**: one question at a time; price asked → deflection line; fits → offers a consultation; doesn't fit → polite close. Vaani LLM · voice "Palak" (Cartesia Sonic)	5a Call ends → **"Call Post-Processing"** webhook POSTs the transcript. Vaani Developers → Webhooks
Website /call browser voice agent		2b **Tap to talk**; the browser turns speech into text. Typing also works. Web Speech API · /call				5b Hang up → transcript sent to the server. /api/agent/end
Meher's brief prompt + lib/rules.ts			3 The five things to learn, Pune/PCMC area list, 6-week minimum, out-of-scope list, the exact **pricing** and **decline** lines. No price figures. services.md · qualified.md · pricing.md			
Gemini gemini-3.6-flash					4b **Replies as Meher** in ~1.5 s. The server swaps any ₹ figure for the deflection line. thinking: minimal · /api/agent/turn 7 **Extracts 31 facts** as strict JSON: scope, area, timeline, size, volunteered budget, decision-maker, mood. **Never decides.** lib/classifier.ts	
Our server Next.js on Vercel				6 Checks the webhook secret, ignores retries, links history, **scans agent lines for any ₹ figure**. /api/vaani/webhook · lib/pipeline.ts 8 **Five gates in code** → Qualified · Declined · One question · Escalate · Missed. lib/gates.ts · 20 tests		
Supabase Postgres			6 **Caller history**: earlier calls from the same number (repeat caller, dropped-and-redialled). calls table			9 **Saves** the call, lead, gate results and cost; feeds the dashboard. calls · leads · system_costs
Gmail SMTP, app password						9 **Emails by outcome**: [Aangan Lead] → designers, [URGENT] → Nikhil, [Follow-up]/[Call-back] → front desk.
People designers · Nikhil · desk						10 Designer calls back within the hour and **gives the price at the consultation**. Nikhil reads the dashboard.

What each part is, and its status today

COMPONENT	STATUS	EVIDENCE
Vaani phone agent	Live	Chat test deflected a price question; two real Vaani calls reached the webhook (one Qualified + emailed).
Website voice agent (/call)	Live	Full scripted call → Qualified + email; tap-to-talk for Safari.
Gemini extraction	Live	21/21 on the September calls, twice.
Five gates (code)	Live	20 automated tests, including pricing-guardrail cases.
Supabase database	Live	September calls plus today's test calls stored.
Gmail handoff	Live	Lead emails received in the school inbox.
Dashboard	Live	aangan-call-desk-omega.vercel.app
Cal.com booking	Connected	Cal.com linked in Vaani with 4 booking tools (check availability, book, reschedule, cancel).

Why it's shaped this way

- **AI reads, code decides.** Gemini only reports what the caller said (step 7). The five gates are plain code (step 8), so a persuasive caller can't talk the model past a rule.
- **No price ever leaves the system.** Price figures are kept out of Meher's brief (step 3), the website agent's replies are filtered (4b), and every transcript is scanned after the call (6).
- **Two front doors, one brain.** Phone and website calls meet at step 6 and get identical treatment.
- **A person exactly where judgment is needed.** Designers own pricing and the consultation; Nikhil owns complaints; the front desk owns call-backs and one-question follow-ups (step 10).
- **Gmail, flagged by subject line.** Each lead is its own searchable thread; a filter on `[Aangan` marks them important so the phone notifies.

Not in scope for this build: WhatsApp and the web form. They would enter at step 6 with the same gates.
