Components map: one call, ring to handoff

Rows are the actors, columns are the stages. Follow the numbers. Step 2a/4a/5a is a phone call through Vaani; 2b/4b/5b is the same conversation on the website. Both paths meet at step 6 and run identical rules from there.

Trigger · Input · Context · Processing (code) · AI · Output · Human

What each part is, and its status today

COMPONENT	STATUS	EVIDENCE
Vaani phone agent	Live	Chat test deflected a price question; two real Vaani calls reached the webhook (one Qualified + emailed).
Website voice agent (/call)	Live	Full scripted call → Qualified + email; tap-to-talk for Safari.
Gemini extraction	Live	21/21 on the September calls, twice.
Five gates (code)	Live	20 automated tests, including pricing-guardrail cases.
Supabase database	Live	September calls plus today's test calls stored.
Gmail handoff	Live	Lead emails received in the school inbox.
Dashboard	Live	aangan-call-desk-omega.vercel.app
Cal.com booking	Not connected	Vaani's Cal.com key didn't save. Meher asks for a preferred time; a designer confirms.
HubSpot deals	Not connected	Code ready; needs a HubSpot token.
Groq / Telegram fallbacks	Not configured	Optional; Gemini and Gmail are the primaries.

Why it's shaped this way

- **AI reads, code decides.** Gemini only reports what the caller said (step 7). The five gates are plain code (step 8), so a persuasive caller can't talk the model past a rule.
- **No price ever leaves the system.** Price figures are kept out of Meher's brief (step 3), the website agent's replies are filtered (4b), and every transcript is scanned after the call (6).
- **Two front doors, one brain.** Phone and website calls meet at step 6 and get identical treatment.
- **A person exactly where judgment is needed.** Designers own pricing and the consultation; Nikhil owns complaints; the front desk owns call-backs and one-question follow-ups (step 10).
- **Gmail, flagged by subject line.** Each lead is its own searchable thread; a filter on `[Aangan` marks them important so the phone notifies.

Not in scope for this build: WhatsApp and the web form. They would enter at step 6 with the same gates.
